

Application Test Report No. 3 (Final)

Date: 2026.06.16

A. Description of Activities Performed

Environments and devices used for testing:

- **System:** Windows 11, **Browser:** Google Chrome v149.0.7827.104 (Resolution: 1920x1080)
- **System:** Windows 11, **Browser:** Mozilla Firefox v151.0.3 (Resolution: 1920x1080)
- **Build number:** v2.0.4 **dated** 16.06.2026

Application areas and types of tests performed:

Application Area	Types of Tests Performed	Time Spent on Testing
User Interface	Acceptance tests, unit tests	0,5 h
Session Trends Module	Acceptance tests, unit tests	0,5 h
Statistical Analyses	Acceptance tests, unit tests	0,5 h
Monthly/Quarterly Change distribution Module	Acceptance tests, unit tests	0,5 h
Fetching data from NBP API	Acceptance tests	0,5 h

B. Summary of All Defects

1. **Fixed and retested:**
 - a) Incorrect business logic for currency pairs (Histogram displays two separate series instead of one cross-rate)
 - b) Missing validation for same currency selection
 - c) Interactive controls are not disabled during API data fetching
2. **To do:** (none)
3. **Risky to fix at the moment:** (none)

C. Detailed Description of Defects

Test 1a

- **Discovered by:** Aliaksandr Yurusau
- **Report in which discovered:** 2
- **Priority:** Highest
- **Repeatability:** Always
- **Browser:** Not applicable
- **Steps to reproduce:**

1. Open the application in a browser.
 2. Select Monthly and Quarterly Change Distribution
- **Test result:** The histogram displays a single cross-rate for selected pair as intended.

Test 1b

- **Discovered by:** Aliaksandr Yurusau
- **Report in which discovered:** 2
- **Priority:** High
- **Repeatability:** Always
- **Browser:** Not applicable
- **Steps to reproduce:**
 1. Open the application in a browser.
 2. Select Monthly and Quarterly Change Distribution
 3. Select the same currency
- **Test result:** The system swaps Base and Quote currencies and prevents selecting the same currency.

Test 1c

- **Discovered by:** Aliaksandr Yurusau
- **Report in which discovered:** 2
- **Priority:** Low
- **Repeatability:** Always with slow connection
- **Browser:** Not applicable
- **Steps to reproduce (e.g. Google Chrome):**
 1. Open the application in a browser.
 2. Open developer console
 3. Select Network
 4. In throttling section select 3G instead of no throttling
 5. Change something on the page (e.g. analysis period)
- **Test result:** System blocks all the controls while loading (including the navigation).

D. Summary of Exit Criteria for All Tests

1. **Did we manage to complete the planned tests?** Yes, all planned testing activities were successfully completed.
2. **Were there any difficulties?** No significant technical difficulties were encountered during testing.
3. **Verification of work time estimates.** The time spent on testing (totaling 2,5 hours) matched the initial estimates.
4. **Realized risks and newly discovered risks.**
 - *Mitigated Risks:* All critical risks identified in previous test cycles (including the critical cross-rate business logic error, missing API chunking, and interactive control vulnerabilities) have been successfully and permanently resolved by the development team.
 - *Newly Discovered Risks:* None. The application has reached a stable Release Candidate state with no open high-priority defects.
5. **Conclusions for the future.**

- The iterative testing approach (spanning across 3 separate test reports) proved to be highly successful. It allowed us to identify and fix critical business logic flaws, ensuring the final product adheres to the Project Specification
- **Minor Accepted Deviation:** The specification mandates that "the chart area shall be replaced by a standard loading spinner" during API data fetching. The team deliberately decided to implement a static "data loading..." text indicator instead. This deviation was accepted as it still successfully fulfills the primary UX goal (informing the user about the loading state) and was deemed sufficient for this release.
